---

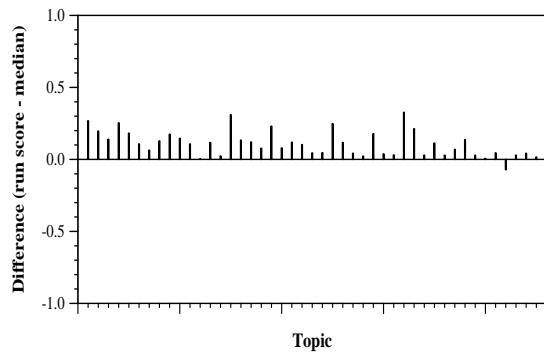

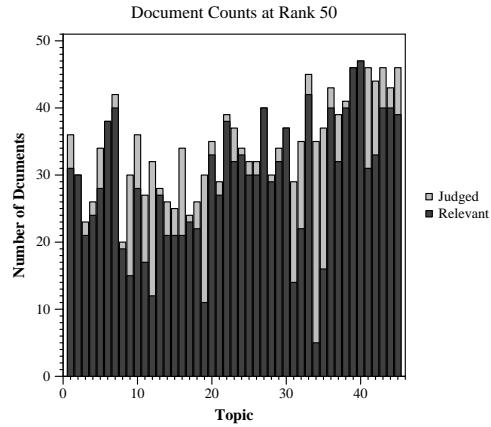

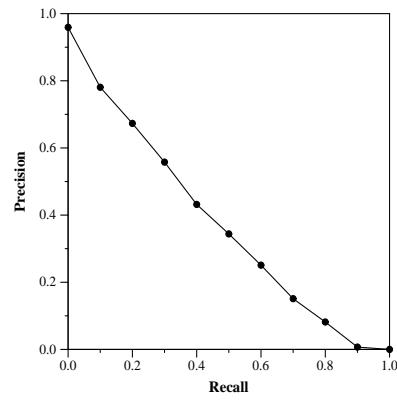

### Run Description

SMART vector DFO run. Base Lnu.ltu weights, with doc indexing = 0.4 metadoc\_Lnu\_weighting + 0.6 JSON\_Lnu\_weighting if a JSON doc exists (= straight Lnu weighting if only metadata info). Run DFO algorithm (the runs are described in my TREC 2005 Routing track, and later, eg 2017 core track). Use relevance info on Rounds 1+2+3 collections to expand and optimize weights on that collection. Expand to top 50 terms. Optimize ignoring top 30 nonrel docs (to accommodate incomplete judgements).
